

Agri Hub — Instant iPhone (iOS) Testing Guide via Expo Go

This step-by-step guide explains how to run and test the Agri Hub mobile application on any iPhone or iPad completely free using Expo Go.

Prerequisites

Requirement	Description
Target Device	Any iPhone or iPad running iOS 13.0 or later
Developer Laptop	Windows / Mac running Agri Hub project
Network	Any Internet connection (Wi-Fi or Mobile 4G/5G data)

Step 1: Install Tunnel Tool on Developer Laptop

Tunnel mode creates a secure global URL that allows your iPhone to connect to the app from any network in the world (even if laptop and iPhone are on different networks).

```
npm install -g @expo/ngrok
```

Step 2: Start Expo Dev Server in Tunnel Mode

In your project directory (agro_react_native), run:

```
npx expo start --tunnel
```

The terminal will display a QR Code and tunnel URL (exp://...).

Step 3: Install Expo Go App on iPhone

1. On the iPhone, open the Apple App Store.
2. Search for 'Expo Go'.
3. Tap Get / Download (Free).

Step 4: Scan & Open Agri Hub on iPhone

1. Open standard iOS Camera app on iPhone.
2. Point camera at terminal QR Code.
3. Tap notification banner: Open in Expo Go.
4. Agri Hub launches live on iPhone!

Troubleshooting Tips

- **Connection issues:** Make sure you ran `npx expo start --tunnel`.
- **Camera banner missing:** Turn ON 'Scan QR Codes' in iPhone Settings -> Camera.
- **Developer Menu:** Shake the iPhone to open Expo developer menu.
